

Dry food

St Laurent

Powder for Toucans, Hornbills and fruit-eating birds

Saint Laurent Range
(Reference : 300027)

Presentation

Complementary food in powder form for breeding toucans, hornbills and other fruit-eating birds. Formulated to increase the level of protein while still maintaining a low level of iron. The powder is pale yellow in colour and contains a food colouring, which turns the powder red when water is added.

Composition

Cereals, vegetables, eggs and egg products, beef gelatine, transformed poultry protein, shellfish, dried fruit, minerals, oil and fats, vegetable by-products, honey, pollen, yeast, salt, vitamins, colouring.

Instructions

Example: with a daily ration of 250 g pellets, to achieve a level of 20% protein (20.20% approx.) give 70% in pellets (e.g. $250 \text{ g} \times 70\% = 175 \text{ g}$) and 30% in powder (example: $250 \text{ g} \times 30\% = 75 \text{ g}$).

Preparation of the powder

- Add the same weight of water to the weight of powder (at 60/80 ° C if possible).
- Mix well.
- Spread the preparation out in a layer about 1 cm thick and place in the refrigerator. When the preparation has set, cut into squares of a suitable size for the bird. If you like, these squares can be shaped by hand into small balls.
- Can be kept for 1-2 days in the fridge.
